

# DDoS 2.0 Planning 2022

Jean-Pierre Aerts – Product Management  
Grégory Degueldre – Networks

# Before we start...

We speak :

# External Cloud Scrubbing Center

## Status?

- External scrubbing center since May 2022
- Already activated a few times

## Future?

- Renewal foreseen in May 2022

# Internal Scrubbing Center

## Status?

- Our current solution has reached its limits.

## Does that mean you are now without any protection? No

- Protect all customers reactively via the External Cloud Scrubbing Center.
- Pro-actively monitoring customers that signed up already but are not on-boarded yet.
- We offer 24\*7 support through our Helpdesk.

# Internal Scrubbing Center

## What about L7 protection?

- A non-volumetric attack can bring down your applications.
- The new Belnet DDoS Mitigation service will offer you protection against volumetric attacks.
- L7 protection against applicative attacks should preferably happen on devices located at the customer's premises.

# Internal Scrubbing Center

## Future?

- We are working on a new solution. RFP has been published.
- Renewal internal scrubbing center foreseen by Q4 2022.

**Belnet**  
dedicated connectivity

**Thank you**  
for your attention
